TEACHING THE BASICS OF COSMETOLOGY IN THE PROCESS OF UNDERGRADUATE AND POSTGRADUATE EDUCATION OF DERMATOVENEROLOGISTS AND COSMETOLOGISTS

When teaching the basics of cosmetology (for thematic courses) during both undergraduate and postgraduate education careful attention should be given to the following topics:

- 1) the structure and function of the skin;
- 2) diagnosis and staging of the skin and cosmetic dermatologic diagnosis;
- 3) peels;
- 4) injection techniques in cosmetology;
- 5) hardware techniques in cosmetology;
- 6) clinical pharmacology and cosmetology;
- 7) basic aesthetic skin problems and their correction.

One of the current topics and practical lectures at these stages is “Structure and function of the skin”. As knowledge of the structure of the skin at different levels (from the molecular to the organ), the operation of the structural formations of

the skin, normal and pathological anatomy and physiology of the skin provide a deep understanding of physiological and pathological processes that occur in the outer coverings of the body. It helps to select the optimal, most effective and safe, individualized cosmetic procedures for persons with different characteristics of the skin.

While teaching cosmetology during undergraduate and postgraduate education relevant specialists careful attention should be paid to the main sections of cosmetology theory and practice, education should bear practical orientation and a theoretical justification for the further application of knowledge as physicians in the treatment of dermatological diseases, and aesthetic correction of deficiencies pharmacists-cosmetologist – for quality control of cosmetic tools.
